8. (Original) A method for providing consumer products in the embedded systems market, the method comprising:  
    forming an electronic product as an adaptive silicon portion structured for operation by a digitation file; and  
    offering the electronic product as two separate consumer items, the adaptive silicon portion and the digitation file, wherein the digitation file bears a higher percentage of a total cost of the electronic product.

9. (Original) The method of claim 8 further comprising offering a selection of multiple, separate digitation files to provide alternative structures for the silicon portion.
10. (Original) The method of claim 8 wherein forming further comprises forming a cellular phone.
11. (Original) The method of claim 8 further comprising selecting one of the digitation files and downloading the selected digitation file into the electronic product.
12. (Original) The method of claim 8 wherein the adaptive silicon portion further comprises an adaptive computing engine.
13. (Original) The method of claim 12 wherein the adaptive computing engine further comprises a controller, one or more reconfigurable matrices, a matrix interconnection network, and a memory.
